

The health and beauty which start from a water storage tank

Activation of a water storage tank by light quantum energy!!

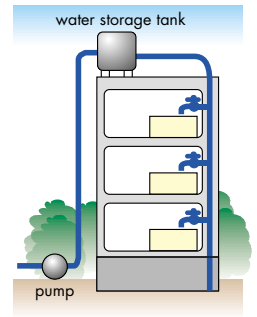

When water storage tank activated device is loaded, beneficial information oscillation energy occurs by technology of the light quantum energy, and water is activated.

The apartment where water storage tank activated device was installed.

Water storage tank is dangerous!!

The chlorine residual included in water of a water tank, and the trihalomethane which be formed byreaction of the chlorine and organic matter is a problem as a carcinogenicity substance. It's the current state that drinking water from water tank is rapidly deteriorated in recent years and becomes the situation which is to the extent a problem occurs to health maintenance. A water tank gets soiled little by little with using everyday. In addition, there are a possibility that an alga occurs in the water tank that installed in a sunny roof as well as passage in years. Raw water of tap water is also deteriorated every year by pollution in a river at present. Therefore demand of healthy water, good taste water and also water good for the environment is increasing.

The water tank system water supply system.

Effect

By activating water by technology of the light quantum energy:

- 1** A water molecule is super molecularized and the realization of the high activated power of the water.
 - An aggregate of a water molecule will be very small, so drinking water becomes mellow.
 - It's easy to be absorbed by a living body and metabolism is promoted.
 - A cell in the body is activated and a tired body is healed, and also own healing properties improves.
- 2** Removal of the unpleasant smell of the tap water by the high activated power of the water.
 - Mold odor decrease by preventing adhesion of "Scale" that is generic name of fur, rust, etc in inside of pipe.
- 3** Realization of safe and good water At a meal.

At a meal.

- Time to boiling water becomes short and cooking time can be reduced.
- The taste of the origin of ingredients is drawn out, and taste becomes better.

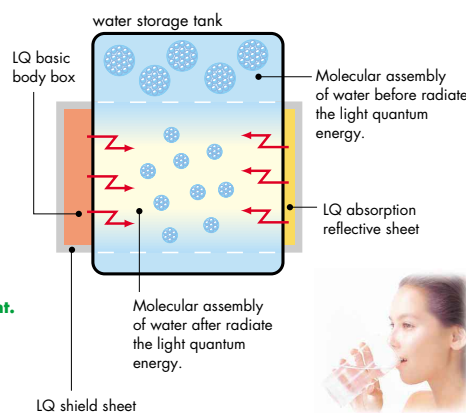

To an animal and a plant.

- When water is given to a pet such a dog or cat, gloss of hair becomes good.
- Foliage plant lasts long vividly.

At the bath.

- Permeates a body, and becomes difficult to feel a chill after bath.

Mechanism

Activated good taste water.

A chemical formula of water is H₂O. Water becomes stable by forming several masses that formed by electric gravitational power which a hydrogen atom and an oxygen atom have. Usual water form big molecular ensemble, but a water molecule will be very small by irradiate the light quantum energy.

The light quantum energy issued from a LQ basic body box reaches a LQ reflective sheet of opposite faces comes through the inside of a water storage tank, and bounces and goes back and forth inside the tank. Meanwhile keep giving feeble vibration to a water molecule all the time. This vibration acts on the atomic nucleus which forms a water molecule, and the function which returns molecular arrangement disordered by influence of ambient environment to the original structure is done as well as cause chemical reaction of combination formation of an atom and an atom and cut off a molecular chain.

LQE activated device attachment case

Installation site : 1-19-4, Kitazawa, Setagaya-ku, Sevenstar Apartment, Tokyo, Japan.
 Installation date : December 4, 2003
 Tank capacity : 8 tons
 Installation contents : LQE activated device is installed on the flank of the roof tank.

Control box installation

LQ basic body box installation

LQ shield sheet installation

The whole view after attachment

Installation site : 2-38-3, Ebisu, Shibuya-ku, Miyosi Apartment, Tokyo, Japan.
 Installation date : March 5, 2004
 Tank capacity : 4 tons
 Installation contents : LQE activated device is installed on the flank of the roof tank.

The apartment whole view

LQ basic body box installation

LQ shield sheet installation

Control box installation

LQE activated to the water plumbing

Product feature

Water storage tank activated device consists of 4, a LQ basic body box, a LQ absorption reflective sheet, LQ shield sheet and control box, and the water quality is activated with non-contact by loading activated device on pipes of a water storage tank or water supply equipment from the outside.

- 1** Easy installation.
It can be installed without removing a part of water supply equipment, so technical knowledge isn't necessary.
- 2** The maintenance after installation is unnecessary.
It isn't necessary to be cleaning of a filter and an exchange like water purifier.
- 3** Can be used for any kinds and sizes of water storage tank.
It's possible to load on all properties from a small-scale apartment to the large-scale office building.
